

**Formula R1 disc brake:** Formula is one of the first names in hydraulic disc brakes and is presently the front-runner in the battle for the lightest cross-country brakes. The new R1 weighs 9.5 ounces, complete with a steel rotor and stainless steel hardware. The titanium-hardware version with Formula's aluminum-hub rotors weighs only nine ounces. The best part is that Formula disc brakes are powerful stoppers. Light and right for \$399 a wheel.
